Exhibit 9

Dear Ms Stockwell,

In reading your report you noted a study where the prions can live in the soil area around the carcass for up to ten years. FWP in past years have claimed 1 year in meetings I've attended.

This is a huge discrepancy. My ranch is in Block Management, but if the prions live in the soil up to ten years, I have to reconsider hunting strategies.

Furthermore, other than more testing, and removal of the animals by hunting, what other options does FWP have?

Sincerely,

Bob Thompson
